PILLARS OF THE EXHIBITION

EXHIBITION

- Company presentations
- Industry trends
- Exhibit showcase

CONFERENCE PROGRAM

- Lectures, seminars
- Discussions with professionals
- Consultancy

COMPETITIONS

- Competition for the Best Exhibit
- Competition for the Best Booth
- Water Utility Skills Competition
- Schools Project
- Photography Contest

NEWS IN THE CONFERENCE PROGRAM

The exhibition will feature an extensive special program focused on current challenges and trends in the field of water management

Conferences, seminars and panel discussions will bring practical experience, innovative solutions and space for professional discussion between Czech and foreign experts

A program stage will be prepared directly on the exhibition area as part of the exhibition. The modern conference rooms in the hall can also be used for sideline activities.

CONNECTING THE CZECH AND SLOVAK WATER MANAGEMENT

ASSOCIATION OF WATER COMPANIES: A STRATEGIC PARTNER FROM SLOVAKIA

The Association of Water Companies (AVS) becomes an expert partner of the VOD-KA exhibition. The partnership connects the two most important professional platforms in the Czech Republic and Slovakia and strengthens cross-border cooperation in the field of water management.

AVS brings together key operators of public water supply and sewerage systems in Slovakia. Its members ensure the supply of drinking water for 95% of the population of Slovakia connected to the public water supply system and employ approximately 8 thousand experts.

The joint involvement of Czech and Slovak partners creates a unique space for sharing experiences, presenting innovations and developing business and expert cooperation across the entire Central European region.

MAIN SPECIALIST TOPICS

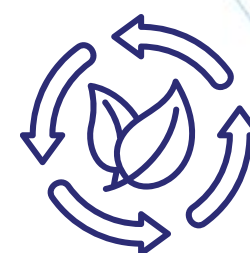

Technology and Innovation

- New Technologies
- Digitalization in the Industry

Water Management

- Urban Wastewater Treatment Directive
- Treated Water and Sludge Management
- Rainwater Management
- Sustainability of Water Resources

Sustainability and Safety

- Set of issues concerning extreme climate phenomena – drought, floods
- Quality and distribution of drinking water
- Cybersecurity and Physical Security of Water Infrastructure
- Energy management in water supply, legislation, subsidies

TARGET GROUPS OF VISITORS

PUBLIC ADMINISTRATION

- Representatives of local authorities, mayors, municipal sphere
- Ministries and regulatory bodies

EXPERTS

- Owners and operators of water supply and sewerage systems
- Construction companies, designers, architects
- Investors and developers
- Industrial companies

INSTITUTIONS

- Financial and consulting institutions
- Academic and research institutions
- Industry partners

URBIS /THE SMART CITIES MEETUP

U URBIS

RUNNING CONCURRENTLY WITH URBIS

MORE EXPERTS.
MORE OPPORTUNITIES.
MORE CONTACTS.

URBIS The Smart Cities Meetup is a specialist event focused on the topic of smart cities and sustainable development. It offers a meeting space for representatives of public administration, institutions and companies who share experiences and seek innovative solutions for cities and regions.

6 000+ visitors

170+ exhibitors

200+ speakers within the program

THEMATIC SYNERGY VOD-KA + URBIS

URBAN AND MUNICIPAL INFRASTRUCTURE

URBIS covers the entire scale of "smart" solutions for the functioning of cities. The VOD-KA event goes into depth in the field of water management, wastewater and sewerage networks. Together they form a very strong unit for both the expert and municipal spheres.

SUSTAINABILITY AND ENVIRONMENT

Water is a key topic for Smart Cities – smart cities address not only energy and transport, but also water management (consumption monitoring, loss reduction, recycling and retention systems). The topic of climate resilience and adaptation of cities to climate change can thus become a joint platform.

TECHNOLOGY AND DIGITALIZATION

URBIS emphasizes the use of technology, sensors, big data and the management of urban services. These technologies can also be used for the management of water and sewage networks – such as smart sensors for monitoring water quality, pressure or leaks.
